FOR IMMEDIATE RELEASE

## **CPROP Launches Its Decentralized Exchange Demo Site**

Covington, Kentucky, USA – In the run up to launching CPROP’s fully regulated Decentralized Exchange (DEX) for commercial real estate-backed digital asset securities later this year, the company has launched its exchange demo site for anyone to experience how the future of CRE transactions will be executed.

“We’re incredibly excited that we can now demonstrate simulated live trading of commercial real estate-backed digital asset securities on our Decentralized Exchange. It will allow CRE asset owners and investors to familiarize themselves with the future of trading these types of digital securities that will vastly improve liquidity in what currently is an inefficient and largely illiquid market,” says CPROP’s co-founder Sandy Selman.

Digital asset securities, which can go by many names including security tokens, digital securities, digital asset tokens and tokenized digital securities, are simply traditional securities that have been digitally formatted. The foundational blockchain technology of the CPROP DEX facilitates the issuance, management and trading of digital securities, which makes it much more efficient than the current traditional approach.

With CPROP’s proper exchange platform design, market participants do not have to be crypto savvy to issue, buy, or sell digital securities, nor should they expect the boom (and ensuing bust) commonly associated with the crypto market. Because these securities are simply digital representations of traditional asset-backed securities and fully regulated, the growth of the digital security provider ecosystem and market volume will be more deliberate and steadier.

CPROP is working with multiple national governments to identify where legislation has progressed the most to allow exchange trading of digital asset securities. In the interim, the company is building a global stakeholder consortium consisting of asset managers, institutional investors and property management firms.

The CPROP DEX demo can be accessed [here](#). For a more detailed explanation on the exchange the project’s White Paper can be downloaded from [here](#).

### **About CPROP**

CPROP develops and deploys proprietary and white-labelled applications across the real estate value chain - using blockchain where appropriate - to help its partners and clients reduce business risk, address pain points and capture new revenue opportunities. Visit [CPROP](#). CPROP tokens can be traded on the [ProBit](#) Exchange.
